Tools, Databases, and OS: Git, Windows, macOS, Linux/Unix, iOS, Android

Other: Scrum, DevOps, Agile, 3-D printing

ACADEMIC PROJECTS

Memoranda: Transforming a calendar application to a gym scheduling solution (Java) Spring 2022

- Understanding Existing Codebase: Through reverse engineering and analysis of structural UML diagrams, our team gained insight into the architecture and functionality of the Memoranda software, preparing us for the task of enhancing its features.
- Enhancing into a Gym Scheduling Application: Leveraging existing code while introducing new features tailored to gym management, such as workout scheduling and membership management, we transformed Memoranda into a comprehensive gym scheduling solution.

Excel Property Management Ledger Software Fall 2023

- Developed Excel **VBA** solution for excel property ledger, reducing errors and enabling role-based access control.
- Implemented restricted access for support staff, maintaining read-only ledger view to prevent unauthorized changes.

Battery Management System (C) Spring 2024

- Collaborated with a team on a touch screen display project utilizing Arduino technology to display battery information
- Led UI design and memory management aspects for the Arduino while contributing to the integration of temperature sensors using a STM32 Nucleo board

PERSONAL PROJECTS

Hackathon Project: BuckIT website (HTML, CSS, Markdown)

WEHack 2025

- Partnered with a non-technical team to design and deploy a website promoting financial literacy.
